Skills for Green Social Entrepreneurship Economy:

Training schemes, good practices and upcoming innovations
from and by Diesis Network

1st June 2022 | 10.00-11.30 (CEST) online

PARTNER EVENT

The right skills and training are essential for a truly green economic transition.

Skills are one of the drivers to achieving a just transition to a green economy, yet skills mismatches and shortages are among the key obstacles to green transition. For skills to become central in transition, the identification, anticipation and provision of green skills are crucial not only among the workers but also among trainers. Green skills and their successful reallocation and upskilling of workers will be needed by all sectors and at all levels of the workforce, to adapt products, services and processes to climate change and attendant environmental requirements and regulations. Moreover, the green transition promises new local and sustainable types of jobs and a new way to empower local communities and inspire younger generations to create a fairer and more just economy, environment, and society. The social economy can be a crucial factor in achieving a truly inclusive green transition by exploiting its added value.
